## Kritik Assignment 8

## March 7, 2024

```
[9]: #4a
     def fun_1(x,y): #From the assignment, just defining the function
         return x**2+y**2
     def grad_f_1(x,y):
         x0=0.1 #defining x0 and y0 values given in assignment
         grad_x = 2*x #setting grad_x and grad_y to be partial derivatives of fun_1
         grad_y = 2*y
         learning_rate = 0.1 #setting learning rate as given in assignment
         for i in range (10): #10 represents the max iterations
             x = x0 - learning rate * grad x #using equation from assignment to find_
      \rightarrow x and y
             y = y0 - learning_rate * grad_y
         return x, y
     answer_x, answer_y = grad_f_1(0.1,0.1)
     print ("Results of gradient descent are:", answer_x, answer_y)
     #This same code was used for 4b-4e. The only thing that changes is the function
     #4e and thus the partial derivatives too, and the x0, y0, learning rate and max_1
      \rightarrow iterations.
```
